International Training Cooperation

We cooperate together in a training activity with Yangon City officials from Myanmar which is sponsored by the Tokyo Metropolitan Government Environment Agency. The training includes method of processing at our factory and also waste processing & recycling involving other various business operators. We are pleased to hear that they were able to learn about the recycling situation in Japan.

Fukushima Prefecture Reconstruction Assistance Project

We carried out preparations for carrying out chemicals left in the difficult-to-return area of Fukushima prefecture since the Great East Japan Earthquake. There were various types of chemicals in various containers with different sizes. We think that work such as sampling, refilling, packing, etc. was necessary due to the fact that

numerous containers are heavily degraded, many of them are at risk of leakage and radiation contamination. It was a work requiring both radiation management and chemical substance management. Through our experiences and professionalism, we completely removed residual chemicals safely and properly.

Meetings for the better future of Japan

The creation of these meetings was inspired by the natural climate in Japan which is nurtured for a long time and refined using aesthetic sense. The nature of Japanese climate and Japanese people made Japan as a country that is easy to live. We have plenty elements that makes us attractive society for the overseas such as "I want to live", "I want to visit", and "I want to model" Japan. In order for Japan to be selected as the world's role model, we would like to interact with everyone talking about various topics.
